

## BUTTS, BINS and SPRING

March has arrived and with it the meteorological beginning of Spring.

You will have seen that two of the March challenges are to: *Install water butts and water diverters to save rainwater for watering plants*

and to:

*compost your kitchen and garden waste.*

If you do not have a water butt or compost bin or would like to add to your collection you may be interested in having a look at these websites below.

West Devon Borough Council is not currently able to sell composters and water butts due to Covid restrictions but inform us that,

*"Composters and Water Butts are still available for purchase from [Get Composting](#) and can be delivered to your property."*

### BUTTS

*A single water butt can collect around five thousand litres of water a year which is great for the garden or washing the car. With a water butt you can help save tap water and reduce your water bill!*

<https://getcomposting.com/en-gb/water-butts/>

The butts are made from recycled plastic.

### BINS

[Get Composting](#) also offers a range of different types of compost bins made out of recycled plastic.

*Did you know, composting at home for just one year can save global warming gases equivalent to all the CO2 your kettle produces annually or your washing machine in 3 months?*

**Here are a couple of links for helpful hints and tips for making compost - no peat required !**
